DOCUMENT: DDR_W105_118.pdf (Daily Drilling Report (DDR))

WELL ID: W-105 | FORMATION: Barail Coal-Shale | INTERVAL: 3,420 m â 3,465 m

DATE: 2026-03-11 | AUTHOR: Drilling Operations Cell, Moran Extension

SHA-256 INTEGRITY HASH: 9987be42ca86ae17492ef709661e2839af2a8974f2d486583dbed3e7e813a97d

EXTRACTED EVENT: Partial Seepage Loss @ 3438 m

SEVERITY: MEDIUM | LOSS RATE: 9.6 bbl/hr

MITIGATION: Continuous background 6 ppb micronized cellulose fiber + 15 bbl Mica sweep

SUMMARY: Daily Drilling Report #118 demonstrating preventive background LCM treatment in Moran-North-105 that restricted Barail mud losses to 9.6 bbl/hr with zero stuck-pipe NPT. VERBATIM OPERATIONAL LOG: 14:00 - 20:00 HRS: Based on offset correlation from W-093 and W-087, pre-treated active system with 6 ppb micronized cellulose fiber at 3,385 m prior to entering middle Barail coal seams. Observed partial losses of 9.6 bbl/hr at 3,438 m which rapidly self-healed to <1.0 bbl/hr following a 15 bbl Mica sweep. Confirmed effectiveness of pre-emptive wellbore strengthening.
